The Honorable Jason Smith Chair Ways and Means Committee U.S. House of Representatives Washington, DC 20515

The Honorable Ron Wyden Chair Committee on Finance U.S. Senate Washington, DC 20510 The Honorable Richard Neal Ranking Member Ways and Means Committee U.S. House of Representatives Washington, DC 20515

The Honorable Mike Crapo Ranking Member Committee on Finance U.S. Senate Washington, DC 20510

Dear Chairs Smith and Wyden and Ranking Members Neal and Crapo:

The undersigned organizations, representing a broad swath of the American agriculture supply chain, urge you to pass a Miscellaneous Tariff Bill (MTB) as soon as possible this year. Choosing not to renew the MTB will lead to economic challenges for U.S. agriculture – from business to farmers and consumers.

The MTB temporarily reduces or eliminate tariffs on products that are not available in the United States. Unfortunately, the MTB has been expired since December 2020, which means U.S. businesses and their customers have paid over \$1.5 billion in anti-competitive tariffs. The lack of a renewal is harming manufacturers of all domestic industries, significantly raising costs and impacting products and jobs and especially impacting small and medium-sized businesses as they pay more for product inputs. A renewed MTB would mean lower input prices and decreased price pressures for U.S. farmers, ranchers, and consumers.

For example, within the U.S. agriculture supply chain, for agricultural chemical companies the MTB reduces import duties on intermediate inputs that are not available or not available in sufficient quantities domestically which helps reduces domestic production costs of the final product. The MTB can save agricultural chemical companies a range of \$2 million to \$89 million per year when enacted – savings that now turn into costs that can have a ripple effect on farmers, businesses, and consumers. Without the savings from the MTB, it could lead to increased prices of final agricultural commodities, raising the cost of food and jeopardizing global competitiveness. Or it could lead to less use of inputs and, without the use of pesticides, farmers can lose up to 80% of their crops annually due to pests and disease. The U.S. agriculture chemical industry would also become less competitive as these savings are no longer being invested into strengthening U.S. manufacturing and research and development.

A renewed MTB means lower input prices and decreased price pressures for U.S. farmers, ranchers, and consumers. It is vital that the MTB passes this year to support American agriculture supply chain.

Sincerely,
